

Optimised for outdoor display, Bright Green Matrix is an LED backlighting system to replace fluorescent tubes. Bright Green Matrix is suitable for all poster sizes, can be installed from new or retrofitted and works in single and double-sided units.

Building on more than 10 years industry experience, the new system is a **breakthrough in affordability** whilst retaining all the benefits of solid state lighting - low energy, low carbon and low maintenance. A typical installation **returns the capital investment within 2 years** and **reduces the lifetime cost by 50%**, in fact installing Bright Green Matrix **pays for itself** through operational savings from day 1.

It's time to dump the tubes - the economic case for Bright Green Matrix is clear and compelling.
